DisasterPath

Help finds you.

An Event-Driven AI Recovery Navigator

Built with [Microsoft Foundry](#)

Hyungmin Kim
henrykim9319@vt.edu

Disaster recovery is a navigation problem.

Survivors shouldn't need to understand government programs to get government help.

1

Fragmented services

2

Information overload

3

Repeated intake

The burden of navigation is placed on the survivor when they are most vulnerable.

What if help found *you*?

Most AI assistants
wait for a prompt.
[DisasterPath](#) waits
for the world to change.

From reactive search to proactive recovery.

needed.

02 **Avoid flooded roads**
Do not walk or drive through floodwater.

03 **Keep essentials close**
Bring medications, a charger, child essentials, and pet supplies if safe.

Why these actions?

RECOVERY STATE
Twin v2
2 computed changes

REASONING
MICROSOFT FOUNDRY
gpt-4.1-mini · Live inference

Microsoft Foundry prioritized the allowed actions: The flash flood warning severity has increased to high, making immediate movement to higher ground the top priority for safety. Avoiding flooded roads is the next most relevant action to prevent danger from water crossing attempts. Finally, preparing household essentials is important but secondary.

What changed? Twin v1 → v2

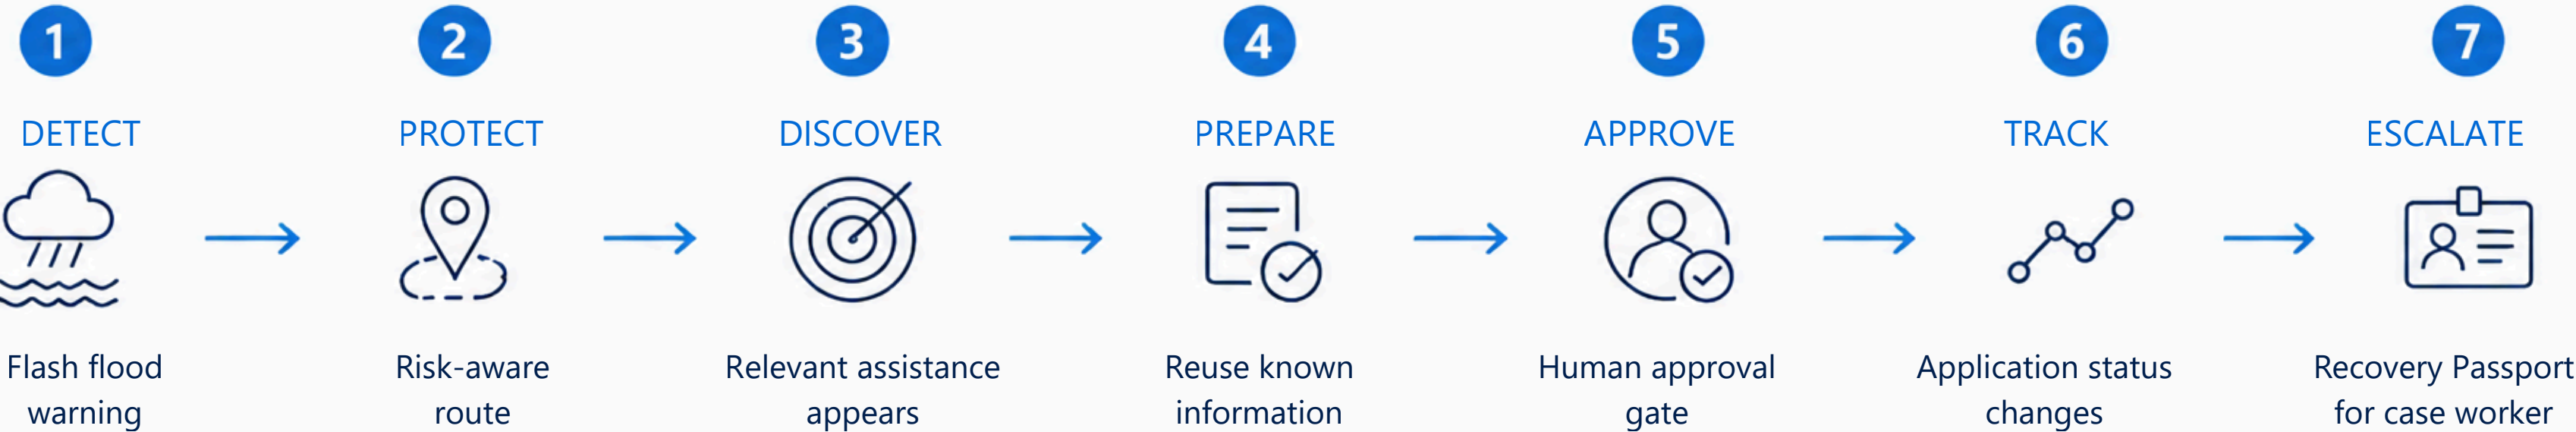

Recovery risk low → High

Next best action None → Move To Higher Ground

One continuous recovery journey.

CORE INNOVATIONS

-  Recovery Digital Twin
-  Assistance Radar
-  Tell Your Story Once
-  Recovery GPS

Tell Your Story Once.

A concise, demo-safe summary for a case worker. Review before sharing; no sensitive identifiers are included.

DISASTERPATH RECOVERY PASS
Demo-safe household summary

Flood | Fairfax County, VA

HOUSEHOLD	CURRENT NEEDS
1 Adult 1 Child Dog	Temporary Housing Pet Support

DAMAGE	RECOVERY STATUS
Home: Uninhabitable ID: Available	Assistance: Action Required DEMO-2026-32731017

NEXT ACTION
Prepare proof of occupancy

Print / save as PDF | Copy for case worker

Hackathon demo uses clearly labeled simulated disaster events and a simulated government portal. State transitions, geospatial intersection, application workflow, and Microsoft Foundry inference are executed by the application.

Don't navigate disaster recovery. Let DisasterPath navigate it with you.
